FOREWORD BY THE CEO

At TM Enviro Industries Sdn Bhd, we specialize in **large-scale Centralized E-Waste Recycling and Asset Management**, providing innovative and eco-friendly solutions to meet the evolving demands of modern industries. With advanced processes and cutting-edge technology, we ensure top-quality service while promoting sustainability.

OUR FOCUS

Our goal is to be the **leading provider** of comprehensive **E-Waste Recycling, Asset Refurbishment, and Asset Management** solutions. We offer **efficient, sustainable, and cost-effective** options to help clients maximize asset value while minimizing environmental impact.

MEETING THE CHALLENGES

We foster a culture of **continuous growth and improvement**, believing that excellence is an ongoing journey. Our core values revolve around **partnership and trust**, as we strive to build enduring client relationships.

We are certainly committed to evolving with the industry's challenges, ensuring long-term success for our clients, partners and most importantly - the environment.

INNOVATION FOR A SUSTAINABLE TOMORROW.

Thank you.

Thinagaranabhan Padmanabhan
(*Thevaan Padma*)
Chief Executive Officer
TM ENVIRO INDUSTRIES SDN BHD

We take pride in standing as the region's leading provider of large-scale Recycling and IT Asset Management solutions.

Established in 2001, we have and currently serving a diverse clientele portfolio, including Government Departments, Government-Linked Companies, Multinational Corporations, Institutions, and other organizations.

As an appointed contractor of the Malaysian Department of Environment (DOE) (*Jabatan Alam Sekitar Malaysia*), we are authorized under **Code SW110** for the responsible and compliant recycling of Electronic Waste (E-Waste).

TM ENVIRO
INDUSTRIES ●

We collect and process all types of e-waste through a centralized, large-scale system designed for efficient handling, consolidation, sorting, and recycling.

Our primary facility in Pulau Indah – Port Klang, is equipped with advanced technology to ensure environmentally responsible waste management.

To extend our reach and better serve clients across Malaysia, we have also established branches in Penang, Sabah and Sarawak, enabling seamless nationwide operations while upholding the highest standards of sustainability and compliance.

**WHO
WE
ARE**

**WHAT
WE
DO**

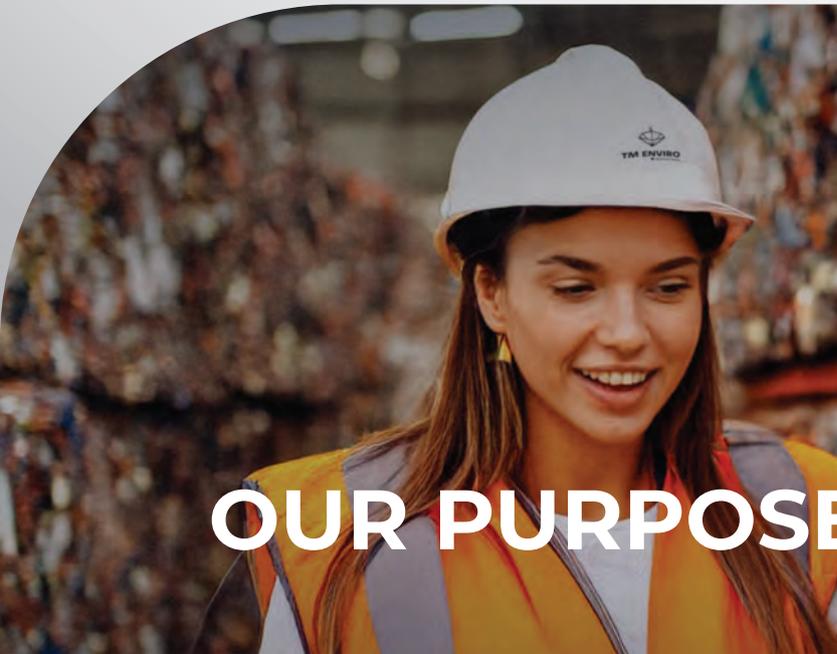

To be Malaysia's and South East Asia's foremost company for large scale E-Waste Centralised Recycling and Asset Management.

OUR VISION

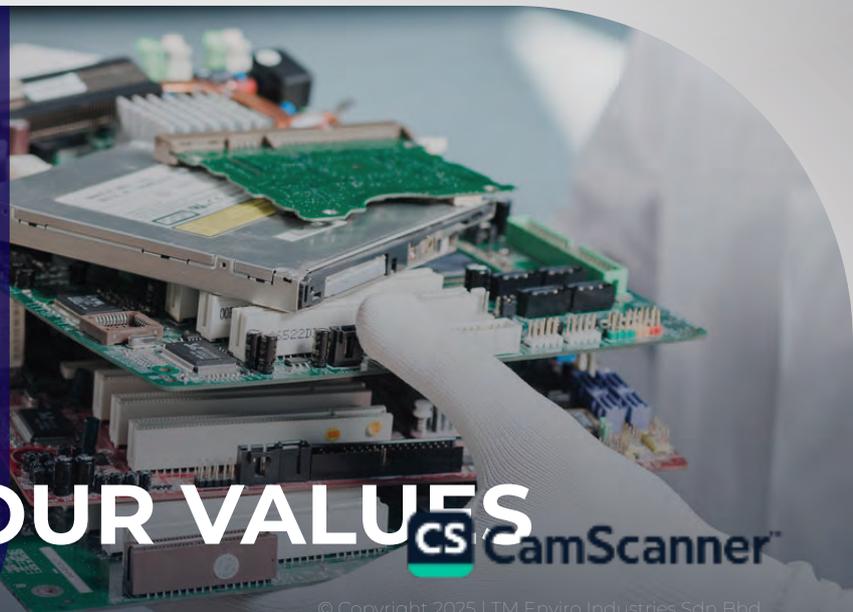

OUR PURPOSE

With a purpose to create a longterm value for clients in the environment of entities, corporations and the communities that we share.

Our values are the people, moving-forward, future-oriented and performance-driven. They reflect the integrity and verify our claim in the industry for a better and sustainable environment.

OUR VALUES

THEVAAN PADMA

Our vision at TM Enviro Industries is to lead the way in sustainable innovation by redefining how we manage resources. Through strategic partnerships and eco-conscious practices, we are committed to creating a greener future while driving value for our stakeholders.

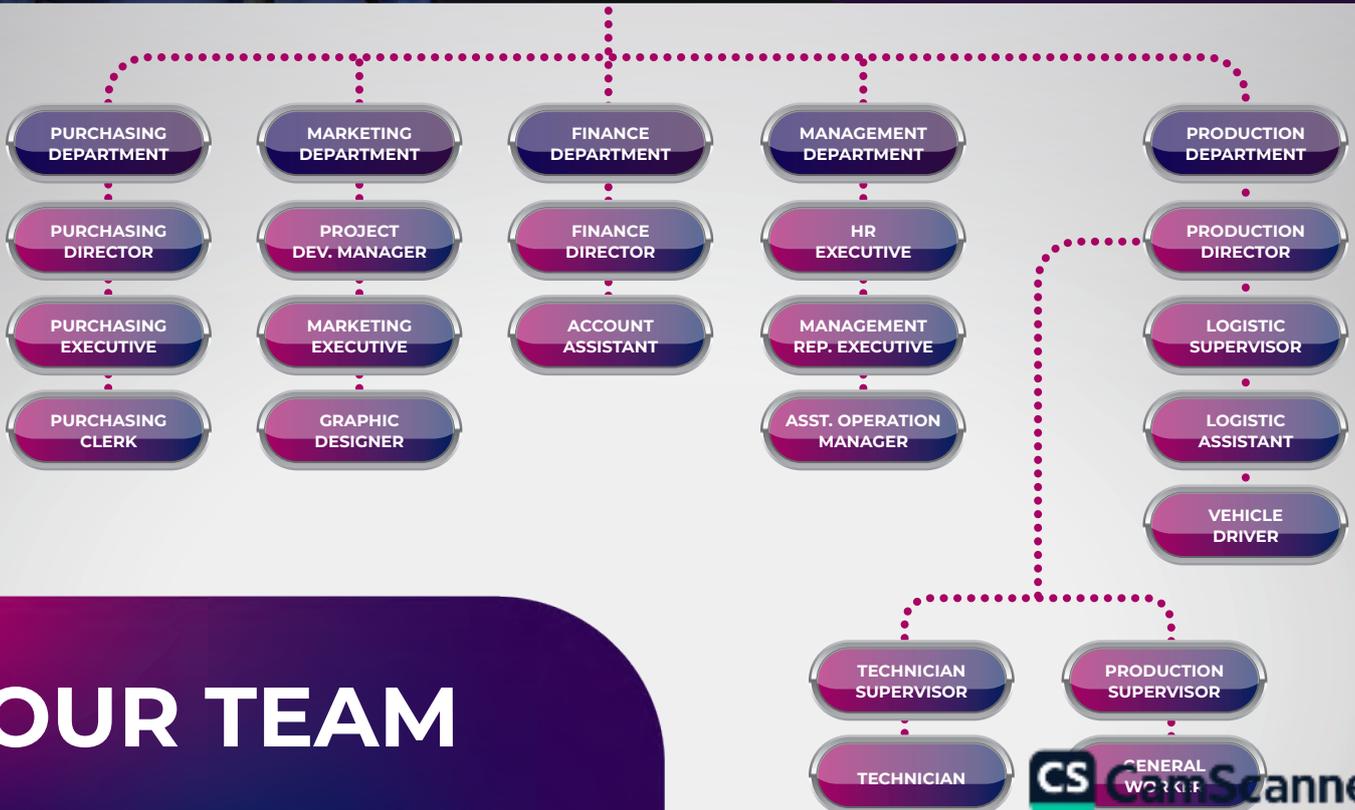

FOUNDER & CHIEF EXECUTIVE OFFICER

KANA PADMA

Our operational excellence is at the heart of everything we do. We strive to implement innovative solutions and efficient practices that align with our mission to drive sustainability and create meaningful impact.

CO-FOUNDER & CHIEF OPERATING OFFICER

OUR TEAM

OUR NEW BRANDING

BRAND EVOLUTION

A Continuation of Our Successful Journey

From the original brand identity, inspired by the national flower of Malaysia:
The Hibiscus (*Bunga Raya*).

TM ENVIRO
● INDUSTRIES

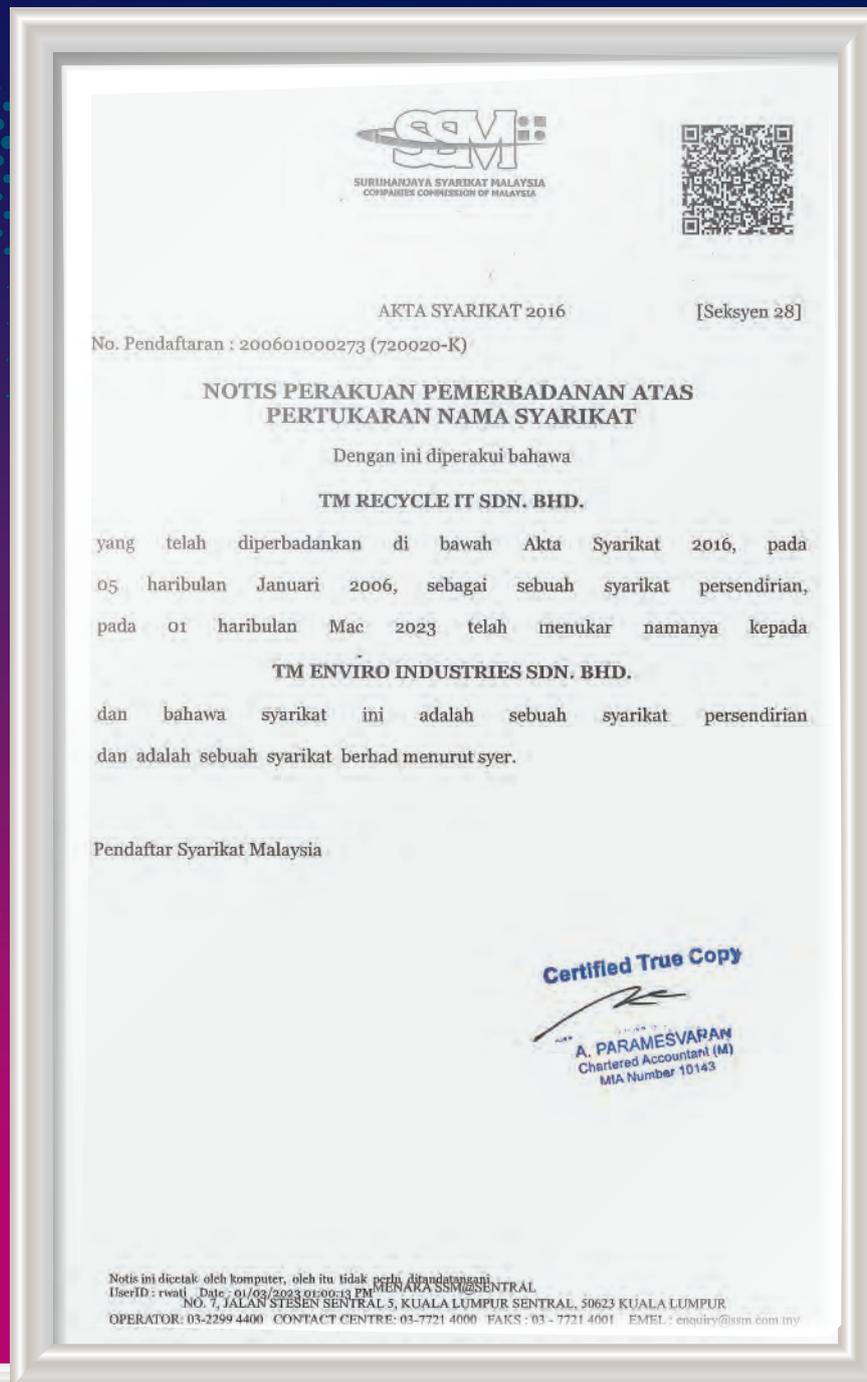

Our new logo features a modern, structured design with a symmetric diamond-shaped hibiscus within a hexagon, blending nature and sustainability. The hexagonal outline represents efficiency and balance, while the stylized hibiscus flower at the center highlights the our core values.

The six petals symbolize harmony and interconnectedness, reflecting our commitment to sustainable innovation and ethical practices.

Each petal represents a key aspect of holistic growth—environmental balance, social equity, and economic sustainability—while the symmetry emphasizes fairness and inclusivity. At the heart of the flower, a unified center signifies the interconnectedness of all efforts, reinforcing the our dedication to creating a thriving, balanced ecosystem for both people and the planet.

OUR PHILOSOPHY - 3R

RETHINK ● REDUCE ● RECYCLE

At TM Enviro Industries, our actions and operations are rooted in a set of core principles that reflect our identity and commitment to sustainability. These principles have guided us since the company's inception, forming the foundation of our culture and work ethic. Central to our philosophy is the **3R dictum - Rethink, Reuse, Recycle**, which shapes our approach to waste management and environmental preservation.

RETHINK

Rethinking is the cornerstone of our 3R principle, requiring us to challenge traditional notions, such as the idea that "new is always better." This mindset drives innovation, compelling us to develop more efficient, creative recycling methods that contribute to a healthier environment. By rethinking, we continuously refine our processes to ensure that sustainability remains at the forefront of our operations.

REUSE

Before recycling or disposal, we assess e-waste for its potential to be reused. Items with remaining utility are reintroduced into the life cycle, extending their usability and conserving resources. This approach delays the need for new materials, reducing the strain on the environment and minimizing the amount of waste entering the waste stream.

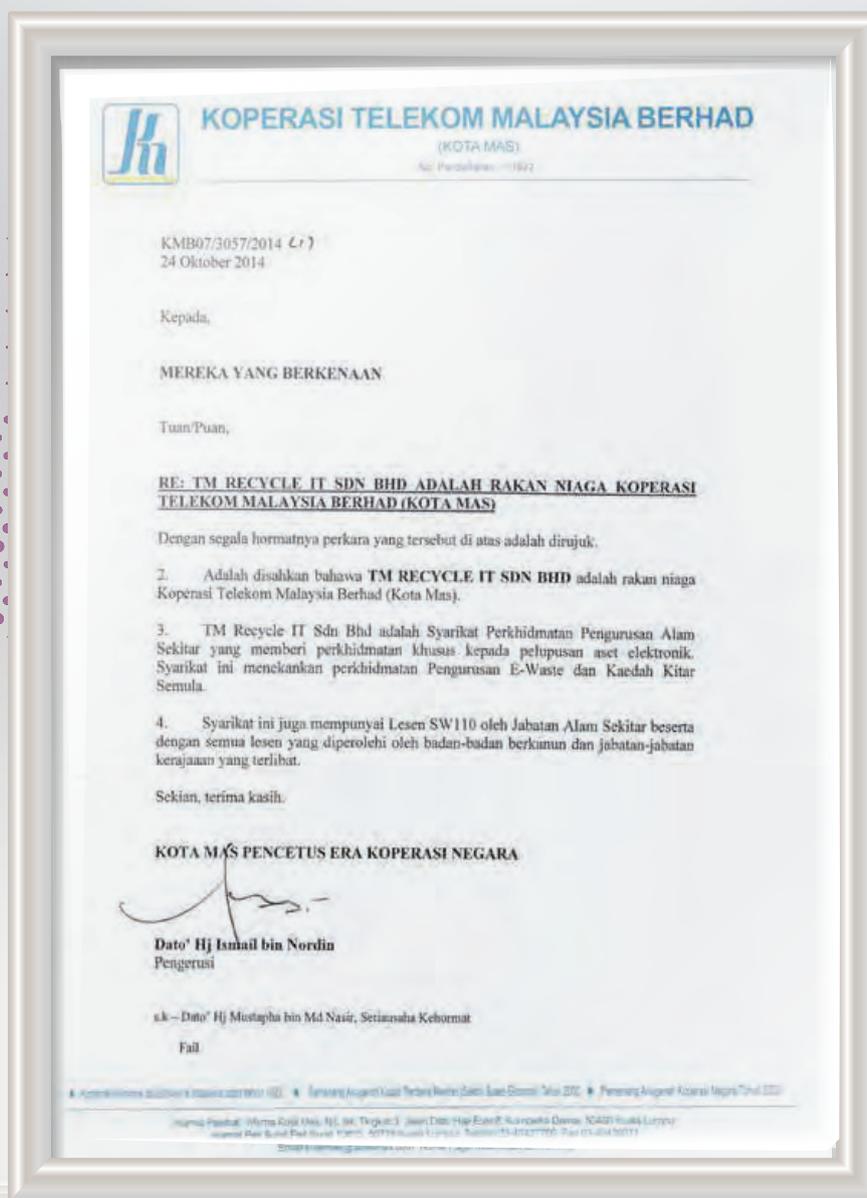

RECYCLE

Recycling at TM Enviro Industries involves transforming old, discarded materials into valuable new products. This process prevents waste from accumulating in landfills and instead converts it into resources that can serve new purposes. By turning potential landfill material into innovative products, we actively contribute to environmental protection and promote sustainable development.

Together, these principles form the backbone of our commitment to advancing eco-friendly practices, ensuring that our work not only meets current environmental challenges but also lays the groundwork for a sustainable future.

STRATEGIC BUSINESS ALLIANCE & PARTNERSHIP

TM Enviro Industries is dedicated to fostering strategic business alliances that enhance effective partnerships. This approach ensures the company remains competitive while building long-term, mutually beneficial relationships to drive sustainable growth and innovation.

ABOUT E-WASTE

E-waste, or electronic waste, refers to electrical appliances or electronic items that are no longer functional, obsolete, or have reached the end of their useful life. This includes a wide range of products, from computers, servers, and printers to household appliances such as microwave ovens, refrigerators, televisions, and much more. Proper disposal of e-waste is critical for environmental protection and is a key step toward achieving a sustainable future.

THE IMPACT OF E-WASTE

Improper disposal of e-waste can lead to the release of hazardous materials, such as mercury and lead, which are commonly found in electronics. When e-waste is buried in landfills, these toxic substances can seep into the soil and contaminate waterways, causing significant harm to both human health and the environment. At TM Enviro Industries, we are dedicated to ensuring that all e-waste we manage is disposed of responsibly and in full compliance with the Malaysian Department of Environment (DOE) regulations, safeguarding both people and the planet.

E-WASTE VS THE ENVIRONMENT

Improper disposal of e-waste leads to the release of hazardous substances, including heavy metals like mercury and lead, commonly found in computers and other electronics. When these materials are discarded in landfills, they gradually break down, allowing toxins to leach into the soil and contaminate groundwater and nearby waterways. This pollution poses severe risks to human health, harming vital ecosystems, wildlife, and communities. Proper e-waste recycling and responsible disposal methods are essential to prevent environmental degradation and safeguard future generations from toxic exposure.

HOUSEHOLD E-WASTE

- CRT and LCD Monitors
- Television
- Audio Systems
- Washing Machine
- Heaters
- Electric Iron
- Microwave Ovens
- Blenders
- Coffee Makers
- Electric Cookers & Kettles
- Air-Conditioners
- Fans
- Refrigerators
- Digital Cameras
- Mobile Phones
- Tablets
- Air fryers
- Vacuum Cleaners

E-WASTE CATEGORY

ICT BASED E-WASTE

- Desktops and PCs
- Servers
- Laptops
- LCD/CRT Monitors
- Keyboards and Mouses
- PCB Circuit Boards
- HDD - Hard Disc Drives
- Power Supply Units
- Photocopiers

- Fax Machines
- Electric and Network Cables
- Communication System
- Network System
- Modems, Routers, Hubs and Switches
- Communication Rack
- PABX
- Projectors
- UPS

OUR PRODUCT & SERVICES

At TM Enviro Industries, we offer a complete suite of products and services designed to manage every stage of an asset's end-of-life cycle. Our streamlined approach ensures full regulatory compliance while prioritizing efficiency and sustainability. With a focus on seamless transitions, we handle the entire process— from coordination to final processing— allowing you to concentrate on your core business priorities with confidence, knowing that your end-of-life assets are managed responsibly and securely.

INDUSTRIAL WASTE MANAGEMENT

- Industrial Electronic Waste / Scrap Management
- Ferrous and Non-Ferrous Scrap Management
- Plastic Scrap Management

COMPUTER AND ELECTRONICS ASSET DISPOSAL

END-OF-LIFE (EOL) IT AND ELECTRONICS ASSET MANAGEMENT

SECURED DATA DESTRUCTION

- Secured Data Destruction - On-site Degauss Method
- Secured Data Destruction - Software Method
- Secured Data Destruction - Physical Destruction Method

INDUSTRIAL WASTE MANAGEMENT (TELCO / DATA CENTRE DECOMMISSIONING)

We specialize in facilitating seamless migration from legacy systems to next-generation technologies, ensuring end-of-life components are removed efficiently without disrupting network operations. Outdated infrastructure takes up valuable space, drives up operational costs, and leaves untapped residual value. Improper decommissioning can also disrupt new technology deployment, leading to costly site outages and regulatory penalties.

Our Decommissioning Solution includes:

- Smooth network migration with minimal disruption
- Strategic planning for seamless transitions
- Comprehensive asset tracking and documentation
- Secure removal and processing of obsolete equipment
- Regulatory-compliant closeout reports, including recycling certificates

With a proven track record of decommissioning and repurposing thousands of assets, we are committed to protecting the integrity, efficiency, and sustainability of your network.

COMPUTER AND ELECTRONICS ASSET DISPOSAL

Upgrading IT and computer assets is a vital aspect of corporate technology advancement. As innovations emerge at an accelerated pace, regular upgrades become essential to maintain efficiency and competitiveness. However, proper disposal of end-of-life assets is equally crucial to ensure compliance with environmental regulations. Improper disposal of outdated equipment can lead to hazardous waste contamination, posing risks to human health and the ecosystem. Implementing responsible e-waste management practices helps mitigate environmental impact while supporting sustainable corporate operations.

We provide a comprehensive IT, computer, and electronics disposal service designed to meet the critical needs of our clients while ensuring compliance with environmental regulations.

Our services include:

- Asset Validation & Audit
- Secure Data Destruction of End-of-Life Devices
- Customized Collection Schedules
- Proper Documented Processes
- Compliant & Environmental Recycling & Disposal

Our holistic approach ensures responsible e-waste management while safeguarding both data security and the environment.

END-OF-LIFE (EOL) IT AND ELECTRONICS ASSET MANAGEMENT

When government agencies, corporations, or organizations transition to new IT systems and electronics, we provide end-to-end management of end-of-life (EOL) IT assets. Our comprehensive disposal strategy ensures efficiency, compliance, and value recovery through:

- IT Asset Management, De-installation, and Decommissioning
- Resale Evaluation to maximize asset value
- Expert assessment for optimal asset disposition
- Nationwide fleet for secure and efficient removal
- Seamless logistics for hassle-free mobilization

With industry expertise and nationwide reach, we eliminate uncertainty, ensuring responsible and cost-effective IT asset disposal.

Our IT and Electronic Asset Management services include:

- IT and Electronic Asset Relocation
- IT and Electronic Asset Deployment
- IT and Electronic Asset Leasing and Lease Management
- IT and Electronic Asset Donation Services

These offerings are designed to support seamless transitions, efficient deployment, and sustainable management of your IT and electronic assets throughout their life cycle.

SECURED DATA DESTRUCTION (ON-SITE DEGAUSS METHOD)

Degaussing is a highly effective method for permanently erasing data from storage devices and magnetic media, such as hard drives and cartridge tapes. This process works by exposing the device to a powerful magnetic field, which neutralizes and eliminates stored data, ensuring it cannot be recovered.

As one of the most reliable and secure forms of data destruction, degaussing meets industry standards for data erasure and is widely used for high-security applications.

At TM Enviro Industries, our advanced degaussing system ensures that your sensitive information is completely and irreversibly destroyed, safeguarding your data privacy.

Key Features of Degaussing:

- Permanent data erasure that effectively neutralizes data stored on magnetic media.
- Uses a precisely measured magnetic field, measured in gauss-oersted (OE), to erase data.
- Ensures data is 100% irretrievable, making it ideal for secure disposal.

With our state-of-the-art degaussing technology, you can be assured that your confidential information remains protected and unrecoverable.

1 The technician will inspect the quantity and serial numbers of all disposal tapes and hard disks on-site.

2 The technician will begin the degaussing process by inserting the hard disk into the degaussing machine to erase the data.

3 The degaussed hard disk will be verified using a computer to ensure the data has been permanently destroyed.

4 Successfully degaussed hard disks will be labeled as "Completed."

5 All disposal hard disks and tapes will be placed in a box and securely sealed.

6 A copy of the disposal asset collection form will be provided to the client.

7 All disposal items will be transported to our designated facility for proper e-waste treatment.

8 A Certificate of Data Destruction will be issued to the client.

CS CamScanner

SECURED DATA DESTRUCTION (SOFTWARE METHOD)

When disposing of IT equipment, it is essential to ensure that all stored data is completely erased to prevent unauthorized access. Simply deleting files, emptying the recycle bin, or reformatting the device is not sufficient to guarantee total data removal. Protecting sensitive company information requires a secure and thorough data destruction process.

Advantages of our Secure Data Destruction Software:

- We utilize a highly acclaimed data erasure software that ensures 99.9% complete data sanitization across all computer assets.
- Once erased, the data cannot be recovered by any existing technology.
- Our service includes a certified data destruction solution, providing clients with an official Certificate of Data Destruction for compliance and security assurance.

With our advanced data destruction methods, you can confidently dispose of your IT equipment while safeguarding your business and sensitive information.

SECURED DATA DESTRUCTION (PHYSICAL DESTRUCTION METHOD)

Physically destroying a hard drive ensures that all stored data becomes completely inaccessible and the device itself is rendered unusable and unreadable. This method is particularly suitable for:

- Hard drives that lack the necessary interface to connect to a computer.
- Drives that cannot reliably boot, making software-based erasure ineffective.
- Situations where absolute data security is required, preventing any possibility of recovery, even through forensic analysis.

Methods of Physical Data Destruction:

- Drilling – Piercing the drive to damage internal components.
- Grinding – Shredding or reducing the drive into small, irrecoverable fragments.
- Crushing – Applying extreme pressure to destroy the drive's structure.

Since physical destruction does not include a Certificate of Data Destruction, it may not be suitable for cases where documentation and proof of erasure are required. However, all residual materials from the destruction process are responsibly recycled in full compliance with the Malaysian Department of Environment (DOE) regulations.
